

CARE AND MAINTENANCE

FITWELL handcrafts its footwear, which can last for many years, if you care and maintain them properly. Please note that the warranty does not cover worn out shoes, improper maintenance, misuse, and abrasion. So we invite you to follow our guidelines for care and maintenance to ensure their longevity in wear.

The natural perspiration of the foot is absorbed and accumulated in the shoe. Only by changing shoes every day, they can dry completely. The insoles help to extend the life of your shoes by absorbing extra moisture of the foot. It is important, however, always to remove the insole from the shoes to let them dry completely.

In the event that your shoes do become very wet, ensure that they are allowed to dry out slowly and naturally, away from direct heat (i.e. sun, radiator).

CLEANING

Remove the insole and the laces. For leather shoes lift any dirt and debris with a soft brush. Then put them under running water, and if necessary, wash the shoes with a mild soap by using a soft brush.

Open the shoes and leave in a dry and ventilated place. Keep away from direct heat sources (i.e. sun, radiator).

Once the shoes are clean:

- In the case of **LEATHER or NUBUCK** uppers treat them with a thin layer of natural conditioner to soften and protect the leather. Be sure to apply small amounts.

- **SUEDE** uppers can be treated using a water based "Suede Protector" spray.

It's best to condition whenever you feel the leather is getting dry, as it is extremely important to avoid any overconditioning.
